SUMMARY

Senior Frontend Developer with 8 years across the full software development lifecycle, specializing in scalable web applications. The only frontend developer on a medical registry platform built from the ground up, now used by 30,000+ medical registrars across 4 countries. Takes full ownership from architecture to delivery inside cross-functional teams, and has mentored 3 junior developers, two of whom grew to mid-level.

EXPERIENCE

Senior Frontend Developer

Feb 2022 - Aug 2026

ZeBrains

Project: Medical Registry System for Laboratory Management (client: **Invitro**)

The only frontend developer on a cross-functional team of 8 (backend, analysts, QA, design), on a registry platform for a laboratory diagnostics network processing approximately 260,000 tests daily.

- Designed and built the frontend from scratch on Feature-Sliced Design: one scalable slice per business entity with dedicated types, UI and API layers, so new modules ship without touching existing ones.
- Implemented the core modules: patient registration, laboratory test order management, appointment scheduling, search and medical record viewing.
- Made unit, snapshot and visual regression coverage (Jest, React Testing Library, Loki) a mandatory release gate, cutting production defects by around 40% over two quarters.
- Cut initial load time by 30% through route-level lazy loading and code splitting.
- Built an offline mode with Service Workers so registrars kept working through network outages.
- Built interfaces from Figma mockups tuned for high-speed registrar workflows, including keyboard shortcuts and tab navigation.
- Integrated REST APIs together with the backend team and analysts: patient data, service catalog, scheduling, order data and test composition.
- Set up code quality tooling (ESLint, Stylelint, Prettier), ran code reviews and mentored 3 junior developers, two of whom reached mid-level.

Result: in production with 30,000+ medical registrars across Russia, Belarus, Kazakhstan and Armenia.

Stack: *React, Next.js, TypeScript, Redux Toolkit, Redux-persist, TanStack Query, Jest, React Testing Library, Loki, Axios, Webpack, Material UI, CSS Modules*

Project: Interview Scheduler for Internal Calls (client: **Avito**)

- Built a scheduling calendar with visual availability display (FullCalendar) and drag-and-drop creation of interview slots (@dnd-kit/core).
- Delivered the full feature set: participant assignment (interviewer plus candidate or employee), email and Telegram notifications, meeting confirmation, rejection and rescheduling, and feedback collection.
- Created a multi-level interviewer filtering system across 6 parameters with debounced search.

Result: MVP delivered on schedule and accepted by the client.

Stack: *React, Next.js, TypeScript, React Hook Form, @dnd-kit/core, TanStack Query, Zustand, Webpack, Material UI, Tailwind CSS*

Frontend Developer

Dec 2020 - Dec 2021

Andersen

Project: CMS for a major streaming service (client: **Wink / Rostelecom**)

- Cut page load time from 4-5 seconds to 2 seconds through code splitting of components and reducers.
- Migrated the build from Webpack to Vite, shortening the local build loop and reducing development iteration time.
- Built complex forms with validation and draft support, optimizing rendering with memoization and lazy loading.
- Implemented a smart date range input with format prediction, cutting data entry time for editors.

Stack: React, TypeScript, Apollo/GraphQL, Ant Design, Redux, Redux-Thunk, Webpack, Vite

Project: CMS for Industrial Equipment Capacity Planning (client: **Siemens**)

- Built complex UI components: tables with drag-and-drop, filtering and lazy loading.
- Delivered responsive fluid layouts that render correctly across all engineer devices.
- Optimized web graphics (WebP integration, SVG sprites) and completed an application redesign that measurably improved document loading speed in the capacity planning tool.

Web Developer

Sep 2019 - Dec 2020

UMI

- Developed, configured and maintained corporate and e-commerce websites on the UMI.CMS platform, including custom template and module development.
- Built and launched custom integrations with 1C, Bitrix24 and amoCRM, streamlining order and inventory synchronization.
- Configured payment gateways, shipping methods and marketplace feed exports (e.g. Yandex.Market) for e-commerce clients.
- Increased organic search traffic by around 70% for client sites by implementing structured SEO settings and a content strategy.
- Performed CMS upgrades, module installations and troubleshooting across multiple client sites.

Result: delivered 100+ websites and online stores on UMI.CMS on time and within budget.

Web Developer

Aug 2018 - Aug 2019

Freelance, Saint Petersburg

- Delivered end-to-end website builds for multiple clients, converting designs into responsive cross-browser layouts and integrating them into WordPress, 1C and 1C-Bitrix.
- Handled backend customization (PHP, XSLT, TPL) and build automation with Gulp, streamlining the handoff from design to production-ready site.
- Managed client requirements, delivery and training of non-technical clients on day-to-day content editing.

SKILLS

Languages: JavaScript, TypeScript, HTML5, CSS3, Sass/Less

Frameworks: React, Next.js

State & data: Redux Toolkit, TanStack Query, Zustand, MobX, Effector, Apollo/GraphQL, REST

Architecture: Feature-Sliced Design, code splitting, lazy loading, Service Workers / offline-first

Testing: Jest, React Testing Library, Loki (visual regression), Storybook

UI: Material UI, Ant Design, Tailwind CSS, CSS Modules, Figma handoff

Build & tooling: Vite, Webpack, ESLint, Stylelint, Prettier, Git, npm, Docker, CI/CD

EDUCATION

Professional JavaScript, Level 2 - HTML Academy, Saint Petersburg, 2019

Professional HTML & CSS, Level 2 - HTML Academy, Saint Petersburg, 2019

Prosthodontics, Diploma - Medical College No. 3, Saint Petersburg, 2012-2015

LANGUAGES

Russian - Native | English - Fluent
